

Sterisol AB Company Profile

Sterisol AB has its origin, some 30 years ago, in the Swedish chemical group, Nobel Industries founded by Alfred Nobel, the Nobel Prize donator. Since 1992 Sterisol is a member of the privately owned **GEPEGROUP**.

In the Nordic countries, Sterisol AB is the leading manufacturer of liquid soaps, hand disinfectants, emollients and other skin care products for professional use. With the patented valves SterisolSystem® specializes in hand hygiene for work places, from heavy and dirty industry to work places where requirements for high quality and a high level of hygiene are important. Such areas are the health care sector (hospitals, nursing homes, etc), the food industry and other industrial segments. Being a full range skin care supplier, Sterisol AB with its SterisolSystem naturally has specialized solutions for other areas like hotels, offices, public wash rooms etc. Today, the SterisolSystem also includes a range of products designed for consumers.

Sterisol's main office is located in Vadstena, Sweden, from where marketing, product development and production are done. In Sweden Sterisol operates with its own sales organisation, which covers all segments of the professional market. Subsidiaries are operating in Finland and Denmark, while the operation on all other markets is performed in close cooperation with specialized and exclusive distributors.

The manufacturing facility is highly automated and operates under strictly clean room conditions, which is necessary as Sterisol products do not contain preservatives of any kind. Sterisol is certified both according to GMP (Good Manufacturing Practice EN-ISO 9001 (Quality) and ISO 14001 (Environment)).

Market presence

In Sweden and Finland Sterisol has its highest market share in large manufacturing industries and other big companies or organisations. In Norway, the SterisolSystem[®] dominates the health care sector and in Denmark food industry is the major market segment.

In the rest of Europe the SterisolSystem[®] is present first of all in the health care and food industry segments, where the hygienic and quality demands are high. This is achieved thanks to strong relationships with specialized distributors on an exclusive basis. A rapidly increasing interest in the field, personal protection, makes the Sterisol concept more interesting also for industries, both in European and other markets.

Sterisol is also established in, or in the process of developing, markets in former East Europe, Russia, the Middle East, India and China. Totally Sterisol operates on round 25 markets.

SterisolSystem[®] - a packaging system unique in the world

The SterisolSystem[®] was developed in the middle of the 70's. The basics elements in the system are the air- and bacteria tight valve and the Sterisol collapsible bag, constituting a disposable dispensing system for liquids. The system makes it possible to eliminate all preservatives since the content is protected by the packaging – also during usage - and not by added chemicals.

The thought behind the SterisolSystem[®] is that it shall give you

- Equal or better efficiency than our competitors
- Superior overall hygiene properties
- As low skin irritation as possible even with frequent use
- Lower risk for allergies
- No dangerous raw materials or impurities, and well documented, to provide maximum safety to the user and the environment
- Flexibility in dispensing systems allowing the user to get the right product, the right dose and on the spot where it is needed
- Environmentally superiority, optimised from a production, packaging, chemical and using point of view

The SterisolSystem[®] was developed according to these requirements and was the first disposable dispensing system in the world. The packaging system protects the preservative free liquids to the last drop, emptying the bag to almost 100 %. Additional environmental objectives were developed to ensure the biodegradability of the products. Another requirement was to minimize the waste material far beyond comparison to other systems.

Consumer Benefits

The SterisolSystem[®] is offering the optimal solution to the hand hygiene problems in all work places. For health care, industry and public places, Sterisol has developed different sales concepts adapted to the specific problems in each area.

The SterisolSystem[®] offers the customer/user the following benefits:

- Preservative free = low allergy potential
- No contamination or oxidation due to airtight packaging = long shelf life
- The product keeps its purity from the first to the last drop = safe for users
- Easy to handle and use – colour coded labelling = convenience and safety
- Easy to load and clean – hygienic and low maintenance costs
- Complete documentation for all ingredients – guarantee for the user
- Minimum chemical and plastic waste – environmentally safe

Our products

The SterisolSystem[®] includes a full range of hand hygiene and disinfectant products presented in different packaging versions which all are air- and bacteria tight, protecting the contents instead of preservatives;

- The 0.7-litre bag system consisting of a disposable bag and a broad variety of wall mounted dispenser
- The new 2.5-litre bag system for industrial use. Harmonized dispensers in design and coordinated in colours with the 0,7-litre dispensers
- The 5.0-litres system "bag-in-box-system" with wall mounted dispensers
- The Globe System with the 0.7 litre disposable globe which can be mounted on the wall, on rails or on almost any horizontal surface with a suction cup
- The new design dispenser for 375 ml aimed for hotel and office environment
- The 200-ml and 100-ml Sterisol Sensitive System for consumers

Eye Wash

Sterisol is also producing and selling emergency eye wash for first aid. The system consists of a plastic bottle containing a sterile isotonic solution that is provided with a patented rinsing cup which gives a long lasting rinsing time - which is in line with professional medical recommendations. The products come in ½ litre, 1 litre and a small eye rinse bottle of 30 ml for flushing away particles from your eye. All eye wash products are disposable and can only be used once.
